

HEEBA ANJUM HOSUR

Technical Product Manager | Growth, Analytics & AI-Driven Execution

heebaanjum25@gmail.com | +91 9538379507 | Bengaluru, Karnataka, India | [linkedin.com/in/heeba-anjum](https://www.linkedin.com/in/heeba-anjum)

PROFESSIONAL SUMMARY

Technical Product Manager who owns outcomes, not just deliverables — driving **crypto platform modules** end-to-end, from ambiguous requirement to shipped feature to validated post-launch impact, for **cross-functional teams of 4-7 engineers and designers**. Reads the product through data first: turns GA4, Search Console, Matomo, and Clarity signals into a prioritized backlog rather than opinion-driven roadmaps. Codes enough (React, Express, MongoDB) and tests enough (Postman, SonarQube) to scope work precisely with engineering instead of translating through a proxy. Rebuilt the PRD workflow around **Claude (Anthropic)** to trade documentation time for more discovery and stakeholder time. Looking to bring that same bias for evidence over assumption to a Technical PM, Growth PM, Product Analyst, or Product Owner role.

CORE SKILLS & TOOLS

- **Product Management:** Product Lifecycle Ownership, PRDs & User Stories, Roadmapping, Backlog Prioritization (RICE-style tradeoffs), Sprint-Based Delivery, Stakeholder Alignment, Release Management
- **Analytics & Experimentation:** GA4, Google Search Console, Matomo, Microsoft Clarity, Funnel & Conversion Analysis, Data-Informed Decision Making, Ahrefs, SEMrush
- **Technical Fluency:** HTML, CSS, JavaScript, React JS, Express JS, MongoDB, Postman (API Testing & Documentation), SonarQube (Code Quality), New Relic, GitHub
- **Product Discovery & AI Tooling:** Figma (Wireframing & Prototyping), Competitive Teardown & Customer Research, Prompt Engineering (Claude/Anthropic)

PROFESSIONAL EXPERIENCE

Junior Product Manager — Ultimez Technology

Aug 2024 - Jun 2026 | Hubli, India

- Owned end-to-end delivery for **multiple modules of a crypto-based web platform**, directing a **cross-functional team of 4-7 engineers and designers** through requirement gathering, PRD authoring, development tracking, release, and post-launch review — the single point of accountability from problem framing to shipped outcome.
- Designed and operationalized a structured Agile-style workflow (kickoff → deployment → post-release validation) in the absence of Jira, giving engineering and design a shared, repeatable cadence and reducing ambiguity around release readiness.
- Diagnosed UX friction by reading heatmaps and session recordings in **GA4, Search Console, Matomo, and Microsoft Clarity**, translating behavioral signals into a prioritized backlog of fixes that directly shaped the product roadmap.
- Directed SEO audits using **Ahrefs and SEMrush**, closing content and keyword gaps to strengthen organic discoverability for content-driven product sections.
- De-risked releases by validating API behavior in **Postman** against documentation pre-launch and partnering with engineering on **SonarQube** code-quality reviews — catching issues before they reached production rather than after.
- Translated requirements into developer-ready **Figma** wireframes and prototypes for new features, shortening the gap between product intent and engineering handoff, with progress tracked via GitHub.
- Operationalized **Claude (Anthropic)** with **prompt engineering** inside the PM workflow, compressing PRD and user-story drafting time and freeing up hours for stakeholder and discovery work.

PORTFOLIO — CASE STUDIES & INDEPENDENT PROJECTS

Swiggy Instamart — Discovery & Onboarding Teardown

Case Study

- Identified that Instamart's category discovery and search flow lagged Blinkit and Zepto by mapping the full app-open-to-first-cart-add journey, isolating **3 specific friction points** competitors had already solved.
- Authored a PRD-style recommendation with concrete UX fixes and target success metrics (search-to-cart conversion, time-to-first-add) — framed the way an engineering team would need it to scope work.

WhatsApp Communities vs. Instagram Channels

Competitor Teardown — Ongoing

- Benchmarked onboarding flows, notification design, and engagement mechanics across both platforms to isolate which specific patterns correlate with higher community retention.
- Produced a feature-prioritization brief translating those findings into recommendations directly applicable to community-product roadmaps.

Google Analytics for Job Seekers

Personal Growth Project — Ongoing

- Engineering a personal GA4-style funnel (applications → responses → interviews → offers) to treat my own job search as a product, with a defined success metric at each stage.
- Applying Growth PM funnel-analysis methods to identify which channels (LinkedIn, referrals, direct) convert best, and iterating strategy based on the data rather than intuition.

EDUCATION

B.E., Computer Science — Dayananda Sagar College of Engineering

Bengaluru, Karnataka | 2024

Diploma, Computer Science — KLE Technological University

Hubli, Karnataka | 2021
